FEVER PANEL - BASIC

HEMOGRAM (Electrical Impedance,Manual,Westergr)			
Hemoglobin	13.10	g/dL	13.00 - 17.00
Packed Cell Volume (PCV)	43.90	%	40.00 - 50.00
RBC Count	4.86	mill/mm3	4.50 - 5.50
MCV	90.30	fL	83.00 - 101.00
MCH	27.00	pg	27.00 - 32.00
MCHC	29.80	g/dL	31.50 - 34.50
Red Cell Distribution Width (RDW)	12.70	%	11.60 - 14.00
Total Leukocyte Count (TLC)	5.74	thou/mm3	4.00 - 10.00
Differential Leucocyte Count (DLC)			
Segmented Neutrophils	71.40	%	40.00 - 80.00
Lymphocytes	17.20	%	20.00 - 40.00
Monocytes	8.10	%	2.00 - 10.00
Eosinophils	3.00	%	1.00 - 6.00
Basophils	0.30	%	<2.00
Absolute Leucocyte Count			
Neutrophils	4.10	thou/mm3	2.00 - 7.00
Lymphocytes	0.99	thou/mm3	1.00 - 3.00
Monocytes	0.46	thou/mm3	0.20 - 1.00
Eosinophils	0.17	thou/mm3	0.02 - 0.50
Basophils	0.02	thou/mm3	0.02 - 0.10

A/c Status : P Ref By : Dr.RAJ	Report Status : Final

Test Name	Results	Units	Bio. Ref. Interval
Platelet Count	129.0	thou/mm3	150.00 - 410.00
Mean Platelet Volume	14.3	fL	6.5 - 12.0
ESR	15	mm/hr	0 - 15

Note

1. As per the recommendation of International council for Standardization in Hematology, the differential leucocyte counts are additionally being reported as absolute numbers of each cell in per unit volume of blood
2. Test conducted on EDTA whole blood

Test Name	Results	Units	Bio. Ref. Interval
MALARIA , P.VIVAX AND P.FALCIPARUM ANTIGEN (Immunochromatography)			
Plasmodium falciparum antigen	Not Detected		
Plasmodium vivax antigen	Not Detected		

- Note:**
1. In the gametogony stage, P.falciparum may not be secreted. Such carriers may show falsely negative result
 2. This test is used to indicate therapeutic response. Positive test results 5-10 days post treatment indicate the possibility of a resistant strain of malaria
 3. Test conducted on EDTA whole blood

Comments

Malaria is a protozoan parasitic infection, prevalent in the Tropical & Subtropical areas of the world. Four species of plasmodium parasites are responsible for malarial infections in humans viz. P.falciparum, P.vivax, P.ovale & P.malariae. Falciparum infections are associated with Cerebral malaria and drug resistance whereas vivax infection is associated with high rate of infectivity and relapse. Differentiation between P.falciparum and P.vivax is of utmost importance for better patient management and speedy recovery.

WIDAL TEST, SERUM	
(Slide Agglutination)	
Salmonella typhi O (TO)	Non Reactive
Salmonella typhi H (TH)	Non Reactive
Salmonella paratyphi A, H (AH)	Non Reactive
Salmonella paratyphi B, H (BH)	Non Reactive

Interpretation

RESULT	REMARKS
Reactive	Indicates presence of IgM & IgG antibodies against Salmonella spp.

Lab No. : 304113756 Age: 32 Years	Received : 8/4/2021 1:35:15PM
A/c Status : P Ref By : Dr.RAJ	Reported : 8/4/2021 8:26:34PM
	Report Status : Final

Test Name	Results	Units	Bio. Ref. Interval
Non-Reactive Indicates absence of IgM & IgG antibodies against Salmonella spp.			

Note:

1. Titres \geq 1:80 of "O" antigen & \geq 1:160 of "H" antigen for Salmonella typhi and titres \geq 1:80 of "H" antigen for Salmonella paratyphi A & B are significant.
2. Rising titres in paired samples taken 7-10 days apart are more significant than a single test.
3. Reactive results indicates ongoing or recent infection by Salmonella spp. and the diagnosis should be confirmed by gold standard test such as Blood culture prior to start of antibiotics.
4. The reactivity will vary with stage of the disease with appearance in 1st week to increase in titres till end of 4th week post which it starts decreasing.
5. In TAB vaccinated patients, high titres of H antibody of \geq 1:160 to each of Salmonellae is observed. They tend to persist for many months and even years while O antibody shows lower titres and disappears within 6 months.
6. Antibiotic treatment during 1st week before the appearance of antibodies tend to suppress the immune response in the form of no or decreasing antibody levels.
7. False positive results/anamnestic response may be seen in patients with past enteric infection during unrelated fevers like Malaria, Influenzae etc. in the form of transient rise in H antibody in Widal test.
8. False negative results may be due to processing of sample collected early in the course of disease (1st week) and immunosuppression.
9. Test conducted on serum.

Uses

- To diagnose infection due to Salmonella spp. (Enteric fever).
- To monitor the progression of disease.
- To assess the response to therapy (decreasing titres) in patients being treated for Enteric fever.
